Q: Unable to execute spring jar from command line I have developed a sample spring application in Eclipse(Helios). It is working properly. But when I create a.jar file of this project in my local machine, the following exception is thrown in run time. I tried to solve this issue. But, I can't. Exception in thread "main" java.lang.NoSuchMethodError:

keymacro is a console macro recorder and editor. It allows you to record macro's to a file, then easily edit it later. Using it you don't need to constantly hit F5 to execute the macro, just start typing the name and it will be executed automatically, very handy when you need to run a command repeatedly. It also provides a windows based GUI interface where you can easily edit and execute your macros. You can find the source code at this link or view the source code below. Hint: If you want a real powerful macro program then don't go for a text editor. Get a more powerful one like: Notepad++. Edit: The author has put the program in the msi installer so all you need to do is run it from your portable media and it should install on any computer.

What's New In I.Ftp?

----- i.Ftp is a little graphical FTP/SFTP client, which does what I need in an FTP client without the size and fuss. i.Ftp also works from portable media like USB keys as it doesn't store anything in the registry and it finds it's resource files via relative paths. A full install is about 900kb so it doesn't eat up much space on your portable storage. If you don't need SFTP support then you can delete libssh.dll and libeay32.dll to make it even smaller! License ----- i.Ftp can be redistributed free of charge. It is distributed as freeware and its usage is solely at the users discretion. i.Ftp Features: ----- * Displays the remote file listing and saves the list to a file * Displays the remote file status and allows a file to be saved or deleted * Opens the saved file * Opens files in the same directory (non recursive) * Displays the file's size * Automatically finds a working network address * Integrates easily with other applications * Free for personal use
Operation: ----- i.Ftp is a standalone application that does not require a server to operate. Using i.Ftp: ----- 1. Create a new connection with the account you wish to connect to 2. Enter the hostname or IP address of the server you wish to connect to 3. Enter your user name and password 4. On Windows, choose "Browse" and select a directory to connect to 5. Save the connection details to a file for later use. 6. To open a file, choose the file from the list and click open. i.Ftp Installation: -----
----- i.Ftp does not install anything on your computer as it works using plain FTP to connect to a server. i.Ftp Keywords: ----- i.Ftp is a graphical FTP/SFTP client which does what I need in an FTP client without the size and fuss. i.Ftp also works from portable media like USB keys as it doesn't store anything in the registry and it finds it's resource files via relative paths. i.Ftp Description: -----
