The JavaScript Object Model, or JS API, brings a new set of features to the desktop version of Photoshop, including new layers and adjustment controls, improved image operations like image resizing, and the ability to group objects. The JS API can be accessed by either JavaScript or ActionScript, and new keyboard shortcuts to sort, organize, and navigate images make editing even easier. With the new Lumenlight module, users can work with both dark and light areas of an image, and easily adjust the hue, saturation, and luminance of all the colors in an image with Auto Color. The JavaScript Object Model (JS API) and the File API allow Photoshop to work with files on the desktop, as well as on mobile devices. These new features include common file operations, such as writing to a file, uploading files to services, moving and copying files, and the ability to manipulate file references. Other features include an updated Image File Formats panel, new file functionality in the File module, and more. A new system-level web technology, WebAssembly, gives all designers

the power to create interactive websites with Photoshop. These new inputs and outputs can be used across Photoshop desktop apps, browsers, and mobile applications. The new CSS Filters panel gives users an easy way to add native CSS filters to their images, helping to create images that look like they were taken from a mobile device. Photoshop's well-rounded features like file organization, cropping, compositing, and color adjustments can be useful for anyone who wants to improve their images. Nevertheless, Photoshop isn't just a scanner cleaner for the casual user. It's a multi-purpose image manipulation tool that offers a lot of options. Photoshop has two big inclusions in the basic package:
